95-100	0	0

A bar chart comparing the number of power-oriented (red bars) and universalist (green bars) respondents across various age groups. The y-axis represents the count of respondents, ranging from 0 to 50. The x-axis lists age groups from 0-4 to 95-100. The chart shows that for most age groups, the number of respondents is very low (near zero). There is a significant spike in the 60-65 age group, where the number of universalists reaches approximately 50, while the number of power-oriented respondents is around 1. All other age groups have counts near zero for both categories.

A bar chart comparing the number of power-oriented (red bars) and universalist (green bars) values across different age groups. The y-axis represents the count, ranging from 0 to 50. The x-axis lists age groups from 0-4 to 95-100. The chart shows that for most age groups, the number of universalist values is significantly higher than the number of power-oriented values. The highest counts are observed in the 60-65 age group, where universalist values reach approximately 50, while power-oriented values are around 1.
